TOTAL SESSIONS	TOTAL TRANSACTONS	TOTAL REVENUE	OVERALL CONVERSION RATE
901,097	12,070	$1,531,766.30	1.34%

KEY INSIGHTS AND RECOMMENDATIONS

Insight 1 - Display Advertising: High revenue Efficiency

Display Advertising contributes 0.69% of total sessions but generates 5.11% of revenue, producing a revenue efficiency index of 7.40. Its average order value of 518.56 is the highest across all marketing channels.

Recommendation: Investigate the campaigns, audience segments, and placements driving Display Advertising's high revenue efficiency. Evaluate opportunities to scale successful campaigns while monitoring conversion rates, acquisition costs, and return on ad spend (ROAS).

Insight 2 - Referral Traffic: Highest Conversion Rate and Revenue Contribution

Referral traffic generates 42.20% of total revenue from 11.59% of total sessions. It records the highest conversion rate at 5.28%, producing 5,514 transactions and a revenue efficiency index of 3.64. These results indicate that Referral is a major contributor to overall marketing performance.

Recommendation: Identify the referral websites and partnerships generating high-quality traffic. Prioritize relationships with strong conversion performance, investigate opportunities to expand successful referral partnerships, and monitor conversion rates, revenue contribution, and traffic quality.

Insight 3 - Organic Search: High Traffic Volume but Lower Revenue Efficiency

Organic Search generates 42.19% of total sessions but contributes only 21.26% of total revenue. Despite attracting 380,215 sessions, the channel records a conversion rate of 0.94% and a revenue efficiency index of 0.50. This indicates that Organic Search drives substantial website traffic but converts visitors into customers less effectively than several other marketing channels.

Recommendation: Analyze organic search landing pages, search intent, and user engagement to identify conversion barriers. Optimize high-traffic pages with clearer calls to action, improved user experience, and relevant content. Conduct A/B testing to improve conversion rates and increase revenue generated from existing organic traffic.

Insight 4 - Social Traffic: High Traffic Volume but Extremely Low Conversion Performance

Social Traffic generates 225,904 sessions, representing 25.07% of total website traffic, but contributes only 0.32% of total revenue. Despite its substantial traffic volume, Social records just 131 transactions, a conversion rate of 0.06%, and a revenue efficiency index of 0.01. This indicates a significant gap between traffic acquisition and revenue generation, suggesting that Social Traffic is currently underperforming as a direct conversion channel.

Recommendation: Investigate the quality and intent of Social Traffic by analyzing traffic sources, audience segments, landing pages, and engagement metrics. Review campaign targeting and messaging to identify opportunities for improving conversions. Evaluate Social's contribution to assisted conversions before making budget decisions. Prioritize A/B testing of landing pages, calls to action, and audience targeting to improve conversion performance.
